Multimedia Kit for Windows

The Multimedia Kit for Windows fast-forwards you and your family into the multimedia revolution with a complete setup—a CD-ROM player, speakers, sound card, headphones, and CD-ROM titles—at a fraction of the price of components purchased separately.

And that means it brings you the benefits of multimedia: entertainment, games, self-improvement, home education, business, and personal finance. There's also a wealth of reference materials, animation, clip art, sound effects, and entertainment available.

The double-speed AppleCD 300i Plus internal CD-ROM player delivers fast access to QuickTime movies, images, sounds, and music stored on CD-ROM discs. It works with audio CD discs and multisession Kodak Photo CD discs, too.

The AppleDesign Powered Speakers II are specially engineered and shielded for use with computers and displays. The speakers provide audiophile-quality sound in a com-

pact size when connected to the Jazz 16 sound card. For outstanding audio quality and private listening, use the Apple Headphones included in the kit.

With the Media Vision Jazz 16 sound card, you get the highest-fidelity sound available on a PC. This card includes 16-bit stereo sound and an advanced music synthesizer, and is compatible with Sound Blaster and Sound Blaster Pro, as well as other popular sound file formats.

The Apple *Multimedia Starter CD* provides an interactive exploration of CD-ROM and multimedia including samples of education, business, and home uses for multimedia and galleries of clip art, photos, QuickTime movies, sounds, and music.

This kit also contains *Compton's Interactive Encyclopedia for Windows* and your choice of up to three free CD-ROM titles from a menu of available CD-ROM titles selected for their value and quality.

Features

AppleCD 300i Plus internal CD-ROM player
- Provides double-speed (up to 342 kilobytes/s) streaming data-transfer rate and 290-ms CD-ROM access
- Supports all major CD-ROM formats
- Works with multisession Kodak Photo CDs
- Plays audio CDs
- Offers motorized tray loading for convenience
- Allows burst data-transfer rate of up to 2.5 MB/s using built-in 256K cache and SCSI II inputs and outputs

AppleDesign Powered Speakers II
- Provide audiophile-quality stereo separation, sound reproduction, and frequency response with these features:
  —tuned port bass reflex system
  —active equalization
  —controlled sound dispersion
- Use transducer, tuned-port design and active equalization
- Incorporate magnetic shielding for use near computer displays and peripheral devices without interference
- Contain built-in noise-reduction circuitry
- Work with personal and portable stereo systems, as well as televisions that support sound output

Apple Headphones
- Outstanding audio quality
- Comfortable, lightweight design
- Extra-long cable for convenience

Media Vision premium 16 bit sound/SCSI card
- Highest-fidelity sound available on a PC
- 16-bit, 44-kHz stereo sound with OPL-3 synthesizer
- Compatible with popular sound file formats including Sound Blaster and AdLib
- Sound synthesis and capture at up to full CD-audio quality
- Port for optional MIDI or game joystick

CD-ROM titles
- Apple *Multimedia Starter CD*
- *Compton's Interactive Encyclopedia for Windows*
- Your choice of up to 3 free CD-ROM titles from a selection of top CD titles

Multimedia Kit for Windows

Product specifications are subject to change. Check with your Apple reseller for the most current information about product specifications and configurations.

Technical Specifications

AppleCD 300i Plus internal CD-ROM player

Performance
- Double-speed (up to 342 kilobytes/s) streaming data-transfer rate
- Access time of 290 ms
- 256K cache and SCSI II inputs and outputs allow burst data-transfer rate of up to 2.5 MB/s

Compatibility
- Supports all major CD-ROM formats
- Can be shared over a network
- Plays standard audio CDs
- Exports audio CD tracks via SCSI

Reliability
- Automatic lens cleaning
- Tested average life of over 125,000 hours

AppleDesign Powered Speakers II

Audio quality
- Extend low-frequency response with tuned-port, bass-reflex system
- Optimize frequency response at all volume levels using active equalization
- Provide controlled sound dispersion for excellent stereo separation at close proximity
- Eliminate external input noise using balanced input circuitry

Computer compatibility and use
- Mix sound from your Macintosh computer with the audio tracks on a CD using dual-input feature
- Incorporate magnetic shielding for use near computer displays and peripheral devices without interference
- Work with personal and portable stereo systems, as well as televisions that support sound output
- Easy setup and installation
- Attractive, compact design fits any desk
- Adjustable speaker leg lets you set tilt angle for best performance
- Built-in dual-channel amplifier
- Volume control conveniently located on front panel
- Headphone jack on front panel for private listening

System requirements
- An IBM PC or PC compatible with a 25-MHz 80386SX or better processor
- At least 4MB of RAM (5MB or more recommended for use with some types of CDs)
- A VGA color display
- A 5.25-inch half-height expansion bay
- An ISA internal expansion slot
- MS-DOS 5.0 and Microsoft Windows version 3.1 or later
